SKILLS

Frontend: React.js, Next.js, Vue.js, Redux, TypeScript, Context API, React Hook Form, Tailwind CSS, HTML5, CSS3, FlutterFlow.

Backend: Node.js, Express.js, RESTful APIs

Programming Languages: JavaScript, Python

Database & Query Language: SQL, MongoDB

Tools & Version Control: Git, GitHub, Figma, Claude, Chat GTP, Playwright, Grok

Concepts: Responsive Design, System Design, Data Structures & Algorithms, Object-Oriented Programming, Prompt Engineering, AWS.

EDUCATION

MS Ramaiah Institute of Technology

Master of Computer Application

Jan 2021 - Aug 2022

Teerthankar Mahaveer University

Bachelor in Computer Application

Aug 2017 - Aug 2020

CERTIFICATION

- Training Basket - Python
- Udemy - JavaScript, Reactjs

AWARDS & ACHIEVEMENTS

Outstanding contributor

Worked closely with team, managing different clients requirement, ensuring smooth technical delivery, giving regular updates, and preparing final reports.

Move the Dot

For efficiently delivering a complex application, leading ransomware incident response, performing root cause analysis, and resolving data exfiltration cases..

AREA OF INTEREST

- Multi-Agent Systems
- Agentic AI
- Generative AI (GenAI)
- Blockchain
- Cloud Computing

PROFESSIONAL EXPERIENCE

Leapmile Robotics

Software Engineer | Aug 2022 - Feb 2026

Bangalore, India

- Spearheaded a team of **5+** developers in code reviews, sprint planning, and Agile development to ensure timely releases and high code quality.
- Architecture and developed responsive and real-time dashboards and smart locker web applications using React.js and TypeScript, catering to **6+** companies and **100K+** users across **4** different user roles.
- Implemented internal tools and UI components using React.js, incorporating custom CSS widgets and API integrations to provide better user experiences and increase productivity.
- Enhanced the performance and scalability of applications using Redux for state management and optimization techniques such as lazy loading, WebSocket, pagination, virtualization, throttling, debouncing, and batch updates to achieve **75%** efficiency improvement.
- Implemented secure RESTful API integrations with JWT authentication and also worked on backend development using Node.js and Python for role-based access and data validation.
- Worked with various teams to deliver high-impact client platforms, resulting in increased product adoption and better customer satisfaction.

KEY PROJECTS

Nano Warehouse Dashboard

Developed a nano warehouse dashboard for monitoring shuttle performance in real-time, which can be used by companies to track users, category logs, and performance for efficient problem resolution.

- Optimized a real-time dashboard that manages robot shuttle movements, logs, inventory, and users by using **WebSocket** technology to update the data in a more efficient way.
- Optimized the performance and scalability of the application by incorporating **pagination**, **lazy loading**, **Redux**, and **memoization** using React.memo & **useMemo** to prevent unnecessary re-renders of the UI.

Smart Locker

Developed a logistics smart locker web application with **4** user roles, allowing seamless booking, OTP-based verification, and efficient delivery management.

- Created a customer-facing application for a smart locker system's reservations using **React**, **TypeScript**, **JavaScript**, and **API integrations**, allowing for OTP-based secure entry for drop/pickup personnel.
- Added features such as one-time OTP generation, resending, and cancellation of reservations, thereby reducing failed deliveries to customers who were unavailable.
