

Shivam Agrawal (Software Engineer)

+91 7352334273 agrawalshivam7352@gmail.com [🌐 ShivamAgrawal](#) [in ShivamAgrawal](#) [🔗 ShivamAgrawal](#)

PROFESSIONAL SUMMARY

Available to join immediately. Software Engineer with **4 years** of experience developing scalable web applications using **React.js**, **Next.js**, **TypeScript**, and **Node.js** for enterprise clients. Proven track record of improving application performance by up to **70%** through **Redux**, lazy loading, WebSockets, and virtualization, while integrating **REST APIs** with platforms such as Zendesk, ServiceNow, and **Amazon Connect**. Experienced in leading small development teams, conducting code reviews, and delivering high-quality software in Agile environments. Currently expanding expertise in **LLM-powered frontend features**, **Agentic AI**, and **Generative AI** applications to build intelligent, modern user experiences.

SKILLS

- **Frontend:** React.js, Next.js, Vue.js, Redux, Hooks, JQuery, Context, Tailwind CSS, HTML5, CSS3, FlutterFlow
- **Backend:** Node.js, Express.js, RESTful APIs
- **Programming Languages:** JavaScript, TypeScript, Python
- **Database & Query Language:** SQL, PostgreSQL
- **Tools & Version Control:** Git, GitHub, Figma
- **Concepts:** System Design, DSA, OOP, Performance Optimization, Responsive Design, Agile

PROFESSIONAL EXPERIENCE

Software Engineer - **Zuqo Technologies** (Short-term engagement)

Mar 2026 - Jun 2026 | Bangalore, India

- Built AI-assisted frontend modules and real-time dashboards using **React.js** and **TypeScript**, supporting customer intelligence and contact center use cases.
- Integrated REST APIs with enterprise platforms including **Zendesk**, **ServiceNow**, and **Amazon Connect**, reducing manual agent lookup steps and improving dashboard load performance.

Software Engineer - **Leapmile Robotics**

Aug 2022 - Feb 2026 | Bangalore, India

- Led a **small team** of developers through code reviews, sprint planning, Agile ceremonies, and technical mentoring, ensuring high-quality releases, improved code standards, and on-time project delivery.
- Developed responsive, reusable components scalable real-time dashboards and smart locker management applications using **React.js**, **TypeScript**, **Redux**, and **Tailwind CSS**, serving **100K+** users across **6+** enterprise clients with role-based access for **4 user** types.
- Improved application performance by **70%** through code splitting, lazy loading, React.memo, virtualization, pagination, throttling, debouncing, optimized state management, and efficient rendering techniques.
- Integrated secure **REST APIs** with **JWT authentication**, role-based authorization, and real-time WebSocket communication, enabling reliable live data updates and seamless user experiences.
- Optimized API requests with caching, request batching, error handling, and loading states, improving application reliability, responsiveness, and overall user experience also participated in requirement analysis, feature planning, production deployments, debugging, and post-release monitoring to ensure application stability and continuous improvement.

KEY PROJECTS

Nano Warehouse Dashboard

Real-time warehouse monitoring dashboard for tracking robot shuttle performance, inventory, logs, and user activity.

- Built a real-time monitoring dashboard using **React, TypeScript, WebSocket, and Redux** to track robot shuttle movements, inventory, logs, and user activities.
- Optimized performance and scalability using **pagination, lazy loading, Redux, and memoization** (React.memo & useMemo) to prevent unnecessary re-renders.
- Built and maintained Node.js/Express backend services powering the real-time dashboard APIs, and containerized the application using Docker, integrating deployments into the team's CI/CD pipeline for consistent, reliable releases.

Smart Locker

Customer-facing logistics smart locker application supporting 4 user roles, OTP-based verification, and delivery management.

- Built the application using **React, TypeScript, JavaScript, and REST APIs** to support secure parcel booking and retrieval. Designed role-based access control for **4 user roles** with protected routes and permission-based workflows.
- Built a secure OTP authentication system covering generation, verification, resend, and cancellation workflows.
- Integrated backend APIs and optimized UX through responsive UI, form validation, and error handling, reducing failed deliveries.

EDUCATION

Master of Computer Application - MS Ramaiah Institute of Technology	Jan 2021 - Aug 2022
Bachelor of Computer Application - Teerthankar Mahaveer University	Aug 2017 - Aug 2020

CERTIFICATIONS

- JavaScript & React.js – Udemy
- Python – Training Basket

AWARDS & ACHIEVEMENTS

- **Outstanding Contributor** – Recognized for managing diverse client requirements, ensuring smooth technical delivery, and preparing regular delivery reports.
- **Move the Dot Award** – Recognized for cross-functional contribution during a security incident response, including root cause analysis and remediation support alongside core development work.

AREAS OF INTEREST

- Cloud Computing
- Agentic AI
- Multi-Agent Systems
- Generative AI (GenAI)
- Blockchain
