 +91 7352334273  agrawalshivam7352@gmail.com  ShivamAgrawal  ShivamAgrawal  ShivamAgrawal

SKILLS

Frontend: React.js, Next.js, Vue.js, Redux, TypeScript, Context API, Tailwind CSS, HTML5, CSS3, FlutterFlow.

Backend: Node.js, Express.js, RESTful APIs

Programming Languages: JavaScript, Python

Database & Query Language: SQL, MongoDB

Tools & Version Control: Git, GitHub, Docker, CI/CD, Figma, Playwright

Concepts: Responsive Design, System Design, Data Structures & Algorithms, OOP, Performance Optimization, Agile/Scrum, AWS

EDUCATION

MS Ramaiah Institute of Technology
Master of Computer Application
Jan 2021 - Aug 2022

Teerthankar Mahaveer University
Bachelor in Computer Application
Aug 2017 - Aug 2020

CERTIFICATION

- Training Basket - Python
- Udemey - JavaScript, Reactjs

AWARDS & ACHIEVEMENTS

Outstanding contributor
Worked closely with team, managing different clients requirement, ensuring smooth technical delivery, giving regular updates, and preparing final reports.

Move the Dot
For efficiently delivering a complex application, leading ransomware incident response, performing root cause analysis, and resolving data exfiltration cases..

AREA OF INTEREST

- Multi-Agent Systems
- Agentic AI
- Generative AI (GenAI)
- Blockchain
- Cloud Computing

PROFESSIONAL EXPERIENCE

Zuqo Technologies
Software Engineer | Mar 2026 - Present
Bangalore, India

- Developed AI-native frontend modules and real-time dashboards using React.js and TypeScript, delivering enterprise-grade solutions for customer intelligence and contact center operations.
- Integrated REST APIs with enterprise platforms including Salesforce, Zendesk, ServiceNow, and Amazon Connect while optimizing application performance, scalability, and user experience.

Leapmile Robotics
Software Engineer | Aug 2022 - Feb 2026
Bangalore, India

- Led a small team of developers through code reviews, sprint planning, and Agile delivery, ensuring high-quality releases and on time project execution.
- Developed responsive, real-time dashboards and smart locker applications using React.js and TypeScript, serving **100K+** users across **6+** enterprise clients and **4** user roles.
- Improved application performance by **70%** using Redux, lazy loading, WebSockets, virtualization, pagination, throttling, and debouncing while implementing secure REST API integrations with JWT authentication.

KEY PROJECTS

Nano Warehouse Dashboard
Developed a nano warehouse dashboard for monitoring shuttle performance in real-time, which can be used by companies to track users, category logs, and performance for efficient problem resolution.

- Optimized a real-time dashboard that manages robot shuttle movements, logs, inventory, and users by using **WebSocket** technology to update the data in a more efficient way.
- Optimized the performance and scalability of the application by incorporating **pagination**, **lazy loading**, **Redux**, and **memoization** using **React.memo** & **useMemo** to prevent unnecessary re-renders of the UI.

Smart Locker
Developed a logistics smart locker web application with **4** user roles, allowing seamless booking, OTP-based verification, and efficient delivery management.

- Created a customer-facing application for a smart locker system's reservations using **React**, **TypeScript**, **JavaScript**, and **API integrations**, allowing for OTP-based secure entry for drop/pickup personnel.
- Added features such as one-time OTP generation, resending, and cancellation of reservations, thereby reducing failed deliveries to customers who were unavailable.
